Belgium Technology

A brew pub is a pub or restaurant that brews beer on the premises. Some brew pubs, such as those in Europe, have been brewing traditionally on the premises for hundreds of years.

"A micro brewery is a small brewery with a limited production capacity which, produces hand-crafted beers."

Although originally "micro brewery" was used in relation to the size of breweries, it gradually came to reflect an alternative attitude and approach to brewing flexibility, adaptability, experimentation and customer service

Micro or craft breweries have adopted a different marketing strategy than large, mass-market breweries, offering products that compete on the basis of quality and diversity, instead of low price and advertising.

Brew Pub's have become famous and successful world wide because of the superior taste, wide range and high profitability (up to 300%)

Canada Pure in collaboration with Prodeb Brewery Technology, Belgium brings to you not only process technology and equipments but also franchisee of internationals renowned Belgium brands.
